Heating Control via Smartphone

New **Comfort WiFi** thermostat gives you the opportunity to control your heating system via smartphone

Connection: Wi-Fi connectivity enables remote access to monitor and control the home heating system.

Smart device control: the easiest way to control your heating system with smartphone or tablet whenever you are at home or on the other side of the globe.

Programmable: easy scheduling and adaptive control ensure that comfort temperature is set at the required time.

Weather forecast: overview of outdoor temperatures and weather information for quick heating adaptation.

Energy scheduling: continuous control and monitoring of energy consumption enable financial savings.

Why to choose WiFi thermostat

- The simplest to install - no additional device required
- The easiest to set up - comprehensive wizard for step-by-step guidance
- The simplest to operate - user friendly colour touch display (screen)
- The most reliable way to heat - also fully functional as stand-alone
- The most flexible control - programming on the thermostat and via app/web

WiFi thermostat key features

- Cloud based solutions
- Control anywhere and anytime via Smartphone
- Multiple user operation - More User Profiles
- Scalable for both private home and larger systems
- Direct router connection (no Gateway required)
- Full "Off line" thermostat operation
